

CONNECT TO YOUR BUILDINGS

Building System Integration

Canem's Building Performance solutions take full advantage of new power-management and energy-saving technologies, based on an array of device controls and environmental monitoring systems.

Canem's Building System Integration Services

Canem helps make the job of managing a building easier by helping systems work together like the central nervous system of the body; multi-vendor systems integration enable HVAC, lighting systems, security, and network services to speak to each other.

Building System Integration enables the continuous capture of key performance parameters, making it easy to generate a variety of real-time reports that quantify savings.

The Canem Approach

Building Performance systems feed real-time data into a common database that can be used to show savings and predict future usage patterns. Canem helps you to understand building data by visualizing your facilities on building dashboards that demonstrate energy consumption via analysis tools and scorecards.

Quantifying Building Performance

Portfolio performance information is customizable to suit the needs of management executives; our display dashboards allow quick and reliable analysis of:

- Energy consumption versus baseline
- Cost per square foot
- Total cost per time span
- Carbon footprint
- And more

All metrics can be accessed from virtually anywhere, on any device.

System Value

- 1.** We enable your building to provide you with the information you need, when you need it. If equipment fails, the building pinpoints the fault, and generates an alert, which is sent to you immediately.
- 2.** We ensure the system you install today communicates well with systems you may install in the years ahead, because our solutions are based on industry-standards for networking and inter-operability.
- 3.** We reduce your building operating costs and help you prove these bottom-line savings while creating a building performance profile for the lifecycle of the facility.

Change is constant. Now, so is the ability to measure it.

At Canem, we pride ourselves on our reputation in being leaders of excellence in the industry.

With over 50 years of experience in electrical and data communications contracting services, Canem Smart Building Technologies has the expertise to deliver a fully integrated set of building systems and services designed to optimize the manageability and maximize the value of building assets.

Canem Smart Building Technologies optimize the performance of a building by integrating the building's technologies with its people and processes. Our technologies provide energy savings and monitoring capabilities, resulting in higher occupancy and increased asset value.
